Credit Name: CSE 2110 Procedural Programming 1
Assignment Name: Chapter 6 Mastery Exercise 5 (AddCoins)

Error Log Entry

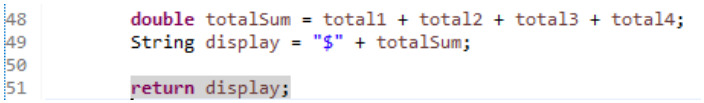

What error message did you encounter (if any)?
I didn't encounter any.
What unexpected behavior did your program exhibit?
The code didn't add the total values together and instead displayed all the individual values all in one long string.

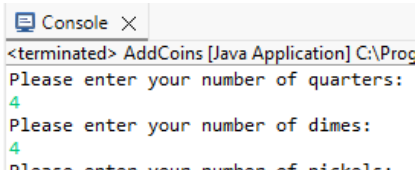

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)
The totals were doubles that I wanted to add together and and display the sum but I had labelled it as a string to fit the requirements of the exercise. So it was just a logic error from a type mismatch.
Include a screenshot of specific lines of code.

How did you fix the issue?
I added another step where I first summed all the totals, and then returned a string that actually worked properly because I wasn't trying to make it do too much at once.
Provide the corrected code or solution using a screenshot.

```
Please enter your number of nickels:
4
Please enter your number of pennies:
4
Total: $1.64
```
