Credit Name: CSE 2110 Procedural Programming 1

Assignment Name: Chapter 6 Mastery Exercise 7 (PerfectInteger)

Error Log Entry

What error message did you encounter (if any)?

Exception in thread "main" java.lang.Error: Unresolved compilation problems:
Syntax error on token "=", <= expected
Type mismatch: cannot convert from int to boolean

at Mastery.PerfectIntegers.isPerfect(PerfectIntegers.java:35)
at Mastery.PerfectIntegers.main(PerfectIntegers.java:20)

What unexpected behavior did your program exhibit?

The code wasn't able to return a boolean.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

I used = (assignment operator) instead of == (comparison operator), which was a syntax error leading to a type mismatch because java could not convert the int that I had unintentionally made into a boolean.

Include a screenshot of specific lines of code.

```
33        for (int i = 1; i < number; i = i + 1)
34        {
35            if (number % i = 0)
36            {
37                sum = sum + i;
38            }
39        }
40
41        return sum = number;
```

How did you fix the issue?

All I had to do was add another "=" to change the meaning of the code. Once it was changed to a comparision the method was able to return a boolean.

Provide the corrected code or solution using a screenshot.

```
33        for (int i = 1; i < number; i = i + 1)
34        {
35            if (number % i == 0)
36            {
37                sum = sum + i;
38            }
39        }
40
41        return sum == number;
```
