Credit Name: CSE 2110 Procedural Programming 1

Assignment Name: Chapter 5 Mastery Exercise 6 (Digits Sum)

Error Log Entry

What error message did you encounter (if any)?

Exception in thread "main" java.lang.Error: Unresolved compilation problems:
The local variable sum may not have been initialized
The local variable sum may not have been initialized

at Mastery.DigitsSum.main(DigitsSum.java:53)

What unexpected behavior did your program exhibit?

The code wouldn't run since my sum variable wasn't initialized

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

The local variable was declared by not initialized before use, which caused an unresolved compilation error at runtime. It was a Compile-Time Error.

Include a screenshot of specific lines of code.

```
18          //Declare a variable for the number that will be entered and the sum of the digits
19          int number;
20          int sum;
```

```
52                  //Add the digit to the total sum
53                  sum += digit;
```

How did you fix the issue?

I explicitly initialized the variable by setting it equal to zero.

Provide the corrected code or solution using a screenshot.

```
18          //Declare a variable for the number that will be entered and the sum of the digits
19          int number;
20          int sum = 0;
```

```
52              //Add the digit to the total sum
53              sum += digit;
```
