

Credit Name: CSE 2140 2nd Language Programming

Assignment Name: Chapter 3 Mastery Exercise 5 (Change)

## Error Log Entry

What error message did you encounter (if any)?

I didn't encounter any

What unexpected behavior did your program exhibit?

I didn't realize that in integer division the remainder is just thrown away

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

A logic error caused by incorrect operator use

Include a screenshot of specific lines of code.

Ex: I divided "change" by 25 but the answer was truncated. I also needed the remainder, but it was thrown away.

How did you fix the issue?

I used integer division for some calculations, but then separately calculated the remainder for future calculations

Provide the corrected code or solution using a screenshot.

```
32     quarters = change / 25;
33     dimes = change % 25 / 10;
34     nickels = change % 25 % 10 / 5;
35     pennies = change % 25 % 10 % 5 / 1;
```
