

Credit Name: CSE 2140 2nd Language Programming
Assignment Name: Chapter 4 Mastery Exercise 5 (Grade)

Error Log Entry

What error message did you encounter (if any)?

I didn't encounter any

What unexpected behavior did your program exhibit?

My code outputted multiple grades

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

A logic error caused by incorrect application of keywords

Include a screenshot of specific lines of code.

```
17  if (percentage < 60 ) {  
18      System.out.println("Your letter grade is: F");  
19  }  
20  
21  if (percentage < 70) {  
22      System.out.println("Your letter grade is: D");  
23  }  
24  
25  if (percentage < 80) {  
26      System.out.println("Your letter grade is: C");  
27  }  
28  
29  if (percentage < 90) {  
30      System.out.println("Your letter grade is: B");  
31  }  
32  
33  if (percentage <= 100) {  
34      System.out.println("Your letter grade is: A");  
35  }
```

How did you fix the issue?

I used "else if" statements and a final "else" statement so that each grade isn't outputted unless necessary. I also switched around the order of grades it goes through to make more sense

Provide the corrected code or solution using a screenshot.

```
17  if (percentage >= 90 ) {  
18      System.out.println("Your letter grade is: A");  
19  }  
20  
21  else if (percentage >= 80) {  
22      System.out.println("Your letter grade is: B");  
23  }  
24  
25  else if (percentage >= 70) {  
26      System.out.println("Your letter grade is: C");  
27  }  
28  
29  else if (percentage >= 60) {  
30      System.out.println("Your letter grade is: D");  
31  }  
32  
33  else {  
34      System.out.println("Your letter grade is: F");  
35  }
```
