

Credit Name: CSE 2140 2nd Language Programming
Assignment Name: Chapter 4 Mastery Exercise 5 (Grade)

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

The IPO chart was the main thing that helped me understand the what I needed to ask the user, what to calculate, and how to present the information.

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

I understood what I had to do but I forgot how to use if else statements. I referred to W3Schools to see how to use if else statements correctly.

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

I broke it down into asking the user for an input, calculating which grade reflects the percentage and then how to efficiently present the output affiliated with that grade.

How did you decide on the tools, data structures, or algorithms to use?

The data input and calculations were all just using natural numbers so I could just use an int variable. I also decided to use the if else structure because it allowed me to have multiple possible outputs depending on the input, but only 1 output that actually executes.

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

This code was fairly short so I wrote what I thought could work and then tested small parts of code I was unsure about.

How did you test your solution along the way to make sure it was working?

I would run a few lines of test code to see if I was on the right track. If it didn't work, the structure of the code made it easy to just copy and paste new lines of code with a few alterations.

Overcoming Challenges

What part of the problem was the most difficult for you?

I had to do a bit of research to relearn the correct application of if else statements.

How did you handle moments when you felt stuck or unsure of what to do next?

I used the resources around me such as the textbook, W3Schools and friends.

Learning

Was there anything you learned that you think will help you with future challenges?

I now have a better understanding of how to use if else statements in java which is definitely a skill that will help with future codes.
